

A text for thinking bacteriologists . . .

Basic Bacteriology

**Its Biological and
Chemical Background**
Fourth Edition

Carl Lamanna, Ph.D., *Deputy and Scientific Advisor, Life Sciences Division, Office of Chief of Research and Development, Department of the Army;*
M. Frank Malette, Ph.D., *Professor of Biochemistry, The Pennsylvania State University; and*
Leonard N. Zimmerman, Ph.D., *Professor of Microbiology, The Pennsylvania State University*

For many years, this book has been recognized as a fundamental source of information. Every aspect of the study of bacteria is here, with emphasis on ideas and principles of physics, chemistry, and biology as used by the bacteriologist. New thoughts are evident in discussions of taxonomy, structure, genetics, and metabolism; chapters on energy transfer and biosynthesis are expanded accounts from previous editions. Nearly 100 pages and 100 illustrations have been added. A precise treatment of bacteria as unique, viable subjects for study.

1973 / 1150 pages / 250 figures / \$37.00

SPORES **V**

Edited by

HARLYN O. HALVORSON, RICHARD HANSON, AND
L. LEON CAMPBELL

A publication comprising the papers presented at the Fifth International Spore Conference, held at Fontana, Wisconsin, 8-10 October 1971.

This book contains reviews as well as reports of original and basic research in eight related areas of interest regarding spores.

1. Structure and chemical nature of spores.
2. Genetics of spore forms.
3. Biochemical changes during sporulation:
Sporulation-related events.
4. Regulation of macromolecular synthesis during
sporulation and outgrowth.
5. Ecology of spore forms.
6. Immunology of spores and spore forms.
7. Cryptobiosis: Dormancy and its alterations.
8. Biochemical mechanisms of germination.

This book will serve as a valuable resource book for investigators, teachers, students, industry, and libraries.

FERMENTATION TECHNOLOGY TODAY

Proceedings of the IVth International Fermentation Symposium
Edited by Dr. Gyozo Terui

This volume contains all the papers presented at the focal topic sessions of the IV International Fermentation Symposium held in Kyoto during March 19-25, 1972. Valuable, up-to-date information in the field of fermentation technology is presented.

Copies of *Fermentation Technology Today* are now available. The volume was published in May 1973.

Contents include:

(1) Fermentation Dynamics; (2) Mass Transfer and Scale-up; (3) Continuous Culture; (4) Instrumentation for Process Control; (5) Genetics Applied to Process Improvement; (6) Amino Acids and Nucleic Acid-Related Products by Fermentation; (7) Microbial Enzymes; (8) Water-Insoluble Enzyme Derivatives; (9) Physiologically Active Substances by Fermentation; (10) Biomass from Noncarbohydrate Organic Substances; (11) Utilization of Autotrophic Microbes; (12) Microbiological Waste Treatment; (13) Recent Progress in Traditional Fermentation Industries; (14) Tissue Culture; (15) Novel Fermentation Products; (16) Production and Use of Enzymes Active in Hydrolyzing Cell Walls and Related Substances; (17) Process Design and Product Recovery; (18) Taxonomy and Ecology of Yeasts; (19) Subcellular Structure and Function of Yeasts; (20) Sexuality, Gene Action, and Breeding of Yeasts; Opening and Closing Lectures.

Index of subjects and authors. 890 pages. Published by the Society of Fermentation Technology, Japan. Distributed by the American Society for Microbiology.

Available at \$18 per copy from:

Seeing is believing with BACTROL DISKS

You want the assurance that you are observing valid test results. That is why you probably make frequent use of reference cultures.

We do not know of a better way. We do know a better form.

BACTROL DISKS

Bactrol Disks are stable, standardized, single-use cultures of bacteria that have been specifically selected for quality control of many bacteriological reagents and procedures.

Bactrol Disks are supplied in sets.

Set A consists of 10 cultures that cover a broad spectrum.

Set B consists of the cultures specified for the control of Antibiotic Susceptibility

Tests by the Kirby-Bauer procedure.

Additional sets will be available to meet expanding requirements.
